

SpineHold

Draper's SpineHold system supports reversible attachment to rough, flat surfaces such as concrete block.

Inspired by the micro-spines and claws that insects and animals use to scale trees and walls, the SpineHold system is a powerful removable adhesive tool. SpineHold works by grabbing onto hundreds of tiny nooks, crannies, and ledges present in almost all concrete, stone, and brick structures. It holds against pulling in one direction, but releases easily in the opposite direction. It leaves no residue when removed and lasts for thousands of applications.

FEATURES:

- No power required
- Easy application and removal - no residue
- Supports up to 6 psi in lateral direction (parallel to surface)
- Customizable dimensions

IDEAS FOR APPLICATIONS:

Removable mounting / Hanging weight / Temporary anchor point
